

PROXIMITY P- Series Mifare Reader

AST LTD

The Proximity P series Mifare reader is suitable for use with Net2 systems. The reader is multi-format and can be used with a choice of access tokens including Mifare Classic protocol ISO 14443A. It can also be used with EM4100 and Paxton Net2 tokens.

Installation - The reader is wired as shown on the control unit label. Be sure to avoid mounting on metal surfaces or near other proximity readers as this will affect the read range. The cable exits centrally from the back of the reader making drilling and mounting very accurate.

Operation - A token is read by holding it within close proximity of the reader. Once a token has been read the control unit looks up the access permissions of that user. Access is then granted or denied as appropriate. If access is granted the green LED flashes. If access is denied the red LED flashes.

Key benefits of Paxton Access systems

- **Real time** online system.
- **Reports** can be created from the doors: Detailed reports of fob usage on each door confirming date and times.
- **Reliable, high quality systems:** We are confident of our quality and back our products with a 5-year guarantee
- **Systems that are incredibly easy to use:** Minimal training required for administrators.
- **Systems that are designed to grow with your needs:** You can add doors as and when needed.
- **Net2 Software:** No hidden/unexpected costs or per seat licences. Software can be installed on as many workstations as required.
- **Free software upgrades:** Net2 software upgrades are free! You are able to take advantage of new features that will be of benefit to you.
